

Hello!

Our local volunteer group, Melville City Climate Action Network, is working to electrify our community with our 'Electrify Melville City' Campaign. That is, to replace appliances and cars with efficient, electric versions powered by renewable energy.

Please complete this survey (just 6 questions) so we get an understanding of where households are at on their electrification journey and what the main barriers might be. We will use this information to inform our activities (e.g. programs, events and partnerships) to support community members on this journey.

The survey takes approximately 3 minutes to complete. Thank to getting involved.
